

CLICK FOUNDRY RELEASE NOTES

R1.1.3 MACHINE PROCESSING FIXES

Gameplay-facing changes for the public build. Share the PDF version as [click-foundry-r1.1.3-patch-notes.pdf](#).

PATCH NOTES

- LV Battery Buffers now show live input and output draw so power bottlenecks are easier to diagnose.
- Fluid-capable machines now allow fluids to be withdrawn from input slots with compatible portable containers.
- LV Air Collectors now route Air through standard fluid pipes and directly into adjacent Centrifuges; Air collection and separation run as deliberate completed batches with corrected timings and yields.
- LV Centrifuges now provide separate item and fluid or gas inputs with a phone-safe terminal layout.
- Machine terminal load bars now remain visible on supported phone sizes without requiring page scrolling.
- LV Assembler recipes now expose one real output, keep completed machine parts in the output slot until collected, and no longer display or grant placeholder outputs while crafting.
